Compass

HELPING PEOPLE NAVIGATE THROUGH PUBLIC SPACES

FUNCTION

Compass™

Compass is a multi-function media tower designed to enhance people's experience in public spaces. Compass is a modular system that includes seating clusters, workstations, and a range of signage and display screens.

Wayfinding Navigate

Display systems can be tailored to meet the information needs of specific facilities and users. Compass' elevated signage can show gate numbers or icons indicating the availability of amenities such as charging stations, Wi-Fi, or restrooms. Interactive screens can deliver advertising, flight information, or event details. Highly adaptable, Compass integrates seamlessly into new or existing wayfinding systems.

Work and Charging Stations Charge

Device charging is the single most sought-after amenity in public spaces. Compass offers charging stations engineered for safety and convenience. Compass lets users charge devices through electrical outlets, USB, or wirelessly. An integrated tabletop and power module can transform Compass into a convenient workspace for users.

Media and FIDS Display

Facilities such as airports and event venues can use Compass display screens to share practical information or to generate revenue through advertising. Compass towers can house LCD screens, or Flight Information Display Systems (FIDS), in either landscape or portrait format. Depending on users' needs, Compass towers can be customized to share travel or event details, play live television, or deliver promotional messages to specific audiences.

FLEXIBILITY

Compass towers can stand alone or integrate with Arconas' modular furniture clusters. Compass can also serve as a hub for multiple workstations and seating arrangements. The tower's innovative hardware allows for the attachment of various work surfaces and case goods. From seating to signage, from work kiosk to display fixtures, Compass offers unsurpassed versatility.

Kiosk / Workstation

From staff workstations to boarding kiosks, Compass can meet a range of needs.

Extrusion

The tower's extrusion features a robust backbone capable of accommodating fixtures such as LCD screens, power outlets and advertising displays. The core's open system provides room for cable management, and the tower's cladding profile makes it easy to perform basic maintenance tasks without disassembling the structure.

Compass is an innovative structure that reflects Arconas's industry-leading expertise in public seating and Entro's more than 45 years of outstanding work in wayfinding strategy and environmental communications.

ARCONAS

ABOUT ARCONAS

Arconas is the leading designer and manufacturer of furniture for airports and public spaces. For over 45 years, we have defined what high design and high performance are all about. Our furniture is elegant, comfortable, and durable; and we build it with a commitment to excellence, safety, and environmental stewardship.

entro

ABOUT ENTRO

A world leader in making public places welcoming and intuitive, Entro has designed and executed successful wayfinding and environmental communications projects around the globe. Entro's approach is driven by a multi-disciplinary team of planners, architects, and industrial and graphic designers. Leading architects and transportation facilities have engaged Entro to shape environments that work with and for the people who use them.
